

iDim Components:

Right Light at the right place, time and amount.

As It has been rightly said that “***the right light at the right place, time and amount***” saves energy and creates an individual level of lighting comfort.

Lighting Control components from Helvar, Finland provide the basis for innovative and tailor-made lighting solutions in which maximum energy efficiency is combined with optimum functionality for the specific application.

Helvar represents the next generation of lighting management for modern lighting systems with occupancy sensing, daylight-dependent control, infra red controllers, spectacular lighting moods and impressive colour chases.

They are perfectly tailored to compliment with state of art iDim DALI Dimmable Ballast and provide 6 out-of-box application modes that are easy to select.

The modes are designed to fulfil the needs for easy-to-use, energy saving lighting control.

The basic functions are pre-programmed and are fully adjustable to meet all requirements.
